

Saving a Pages document in MS word format.

If you have Pages on your Mac and need to save your document in MS Word format, **1** from the “File” menu in Pages, choose “Export To” then choose “next”

Then **2** choose the saving location as you usually do. EASY!

Now your pages document can be opened in Word. Note that this does not replace the Pages document and each time you update the document you will need to export it again.
